

**SELECT  
SITE**

FROM THE EXPERTS  
AT SELECT GROUP

# Protect your people, secure your site

In an industry where safety and security are paramount, **Select Site** delivers the next generation of construction site protection.

Designed by security specialists and powered by cutting-edge technology, **Select Site** brings together advanced camera systems to provide 24/7 intelligent surveillance and compliance monitoring.

Whether managing a small-scale project or a large construction zone, **Select Site** offers tailored solutions to safeguard your people, assets, and operations — all while enhancing site efficiency and accountability.

**SECURE YOUR SITE THE SMART WAY**

## ANPR Camera

### Control access with intelligence

The **Automatic Number Plate Recognition (ANPR) camera** takes access control to a smarter level. Integrated into Select Site, this technology allows you to automate entry and exit for approved vehicles while flagging unauthorised or blacklisted plates instantly. Whether managing subcontractor deliveries or tracking fleet movement, the ANPR camera ensures your site perimeter is monitored with precision.

## PPE Camera

### Enforcing safety standards in real-time

Select Site's **PPE camera** is a vital tool for site compliance and reducing on-site risk. Using AI-powered recognition, this camera can detect whether workers are wearing the appropriate personal protective equipment — including helmets, high-vis vests, gloves, and goggles — as they enter or move through the site. This live monitoring not only supports health and safety protocols but also ensures you meet regulatory obligations and avoid costly non-compliance penalties.

## Thermal Camera

### Detect danger before it strikes

Temperature anomalies can be an early indicator of potential hazards, and the **thermal camera** from Select Site provides a powerful layer of protection. Ideal for detecting overheating machinery, electrical faults, or even unauthorised presence after dark, the camera operates regardless of lighting conditions, making it a crucial asset for 24/7 site safety and security.
